

Claims

1 1. (Original) An obstetric vacuum extractor comprising a suction cup of a hard material,
2 having connection for a tube and a connector piece, a towing means of a flexible material
3 as well as a locking means, whereby the towing means comprises a handle, a connecting
4 part and a connector, characterized in that said connector piece is an integrated part of the
5 suction cup, said connector being arranged to be brought to attachment in said connector
6 piece, said connector piece and connector being movably fixable to each other.

1 2. (Original) An obstetric vacuum extractor according to claim 1, wherein said handle,
2 said connecting means and said connector are made in one piece.

1 3. (Original) An obstetric vacuum extractor according to claim 1, wherein said handle,
2 said connecting means and said connector are made as separate units.

1 4. (Original) An obstetric vacuum extractor according to claim 1, wherein said connector
2 piece is an integrated part of the sphere of the suction cup.

1 5. (Original) An obstetric vacuum extractor according to claim 1, wherein said connector
2 piece comprises on or more parts.

1 6. (Original) An obstetric vacuum extractor according to claim 1, wherein said connector
2 piece comprises a slot.

1 7. (Original) An obstetric vacuum extractor according to claim 1, wherein said connector
2 piece comprises a recess proved in one of its ends.

1 8. (Original) An obstetric vacuum extractor according to claim 1, wherein said connector
2 piece has a part spherical inner surface.

1 9. (Original) An obstetric vacuum extractor according to claim 1, wherein said
2 connecting means is string formed.

- 1 10. (Withdrawn) An obstetric vacuum extractor according to claim 1, wherein said
2 connecting means is ribbon formed.
- 1 11. (Original) An obstetric vacuum extractor according to claim 1, wherein said
2 connector is ball shaped.
- 1 12. (Withdrawn) An obstetric vacuum extractor according to claim 1, wherein said
2 connector is cylindrical.
- 1 13. (Original) An obstetric vacuum extractor according to claim 1, wherein said locking
2 means is a fixable, locking unit provided in the connector piece.
- 1 14. (Original) An obstetric vacuum extractor according to claim 13, wherein said fixable,
2 locking unit has a part spherical end surface.
- 1 15. (Original) An obstetric vacuum extractor according to claim 14, wherein said fixable,
2 locking unit is provided with a radially directed, axially running groove, in which
3 groove part of the connecting means can be received.
- 1 16. (Withdrawn) An obstetric vacuum extractor according to claim 1, wherein said
2 locking means is a snap in unit provided in said connector piece.
- 1 17. (Original) An obstetric vacuum extractor according to claim 1, wherein said locking
2 means is a glueable unit provided in said connector piece.
- 1 18. (Withdrawn) An obstetric vacuum extractor according to claim 1, wherein said
2 locking means is a pin provided in said connector piece.
